

MAGIC COMFORT

- Check that the 'Energy Saving' message comes up on the display, otherwise press key 6
- Put the machine in test mode:
 - Keeping keys 2 and 3 pressed at the same time, also press key 6
- Press key 1 and check that the gear motor rotates anticlockwise, then check the limit switch, making sure that the number 1 keeps lit in the top of the display

- Press key 2 and see that the gear motor rotates clockwise, then check the limit switch, making sure that the number 2 keeps lit in the top of the display

- Also check that the motor is not noisy during rotation
- Press key 3 and check that the coffee grinder is working properly, making sure that it rotates in a clockwise direction and that it is not noisy
- Press key 4 and check that the coffee dosing unit is open
- Keeping key 5 pressed, press key 2 and check the absorption in the boiler
- Turn the tap on and press keys 1 and 6 simultaneously, then check that the pump starts up and that the impulse readings from the turbine rise to about 40 on the display
- Turn the tap off and continue pressing keys 1 and 6, thereby pressurizing the circuit. Look carefully inside the machine to make sure that there are no leaks and that the impulse readings from the turbine go down to 0 on the display
- Check all microswitches:
 - ✓ Turn the arm of the steam knob, making sure that the micro engages halfway round and that the number 4 is displayed.
 - ✓ Activate the group detecting micro and check that the number 6 is displayed

- ✓ Take the dump box out and check that no. 5 disappears from the display
- ✓ Activate the micro dosing unit and check that no. 3 is displayed
- ✓ Check that the no. 7 (Reed water) is shown on the display
- Turn the machine off and on again
